

ICPSR 29961

**Research on Pathways to
Desistance [Maricopa County, AZ
and Philadelphia County, PA]:
Subject Measures, 2000-2010**

Edward P. Mulvey
University of Pittsburgh

Frequencies for 6 Month Follow-up Data

Terms of Use

The terms of use for this study can be found at:
<http://www.icpsr.umich.edu/icpsrweb/ICPSR/studies/29961/terms>

Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

**NOTICE
WARNING CONCERNING COPYRIGHT RESTRICTIONS**

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

CONFIDENTIALITY NOTES

The following measures were implemented to protect the confidentiality of the study's respondents. ICPSR made these decisions in conjunction with the Principal Investigator and his staff.

1. Several questions asked for the specific relationship of family members and friends in multiple sections. These were recoded into broader categories; i.e., "Parents (biological, step, adopted, foster)", "Female relatives (grandma, aunt, niece, girl cousin)".
2. Due to small frequency counts ethnicity groups other than White, African American, and Hispanic were combined together and merged with the group "Other".
3. In the original files, dummy identification codes were present on variables grouping respondents that attended the same school or detention facility, or belonged to the same gang. Although the codes were already de-identified a decision was made to mask the valid data.
4. The specifics concerning household size and composition were recoded. The total number of persons living in the same household was top-coded at nine. With the exception of biological parents, siblings, and grandparents other household members specific relationships were grouped together to form broader categories.
5. The specific ages of a respondent's children (if any) were masked.
6. The section on "Self-Reported Offending" asked a series of six questions about multiple specific crimes and delinquent acts. The series of questions were masked for all respondents for the crimes of forcible sex on another person and for killing another person.

VARIABLE GROUP CROSSWALK ACROSS WAVES

Note: Like variables across waves share the same variable name with the exception of the first two characters which designate what wave the variable is from (i.e., S0 for the baseline; S1 for the 6 Month follow-up; S2 for the 12 Month follow-up; continuing on upto S9 for the 72 month follow-up and SA for variables part of the 84 Month follow-up data.

ICPSR 29961

Research on Pathways to Desistance [Maricopa County, AZ and Philadelphia County, PA]: Subject Measures, 2000-2010

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

6 Month Follow-Up

LINEID: Line Identification Number

This variable was created by ICPSR to provide an exact line number to each case so that the file may be returned, if needed, to its original order as it was received from ICPSR.

Based upon 1,354 valid cases out of 1,354 total cases.

Location: 1-4 (width: 4; decimal: 0)

Variable Type: numeric

CASEID: S1 IntInfo: Subject ID

The variable CASEID was assigned a unique, random identification number by the Principal Investigator. This ID number is the same number for the respondent in each of the 11 waves of this study. Please use this variable when attempting to merge multiple data- files to one another. This number will also be the same to identify respondents across the Pathways data series.

Based upon 1,354 valid cases out of 1,354 total cases.

Location: 5-9 (width: 5; decimal: 0)

Variable Type: numeric

S1INTCOMPSTAT: S1 IntInfo: Interview completion status

Completion status of the interview.

MEASURE: Interview Information

| Value | Label | Unweighted Frequency | % |
|--------------|------------|----------------------|-------------|
| 1 | Complete | 1253 | 92.5 % |
| 2 | Partial | 12 | 0.9 % |
| 4 | Incomplete | 89 | 6.6 % |
| Total | | 1,354 | 100% |

Based upon 1,354 valid cases out of 1,354 total cases.

Location: 10-10 (width: 1; decimal: 0)

Variable Type: numeric

S1QVERSION: S1 IntInfo: Version number associated with programming changes to the interview

| Value | Label | Unweighted Frequency | % |
|-------|-------|----------------------|--------|
| 01.05 | - | 174 | 12.9 % |
| 01.06 | - | 57 | 4.2 % |
| 01.07 | - | 189 | 14.0 % |
| 01.08 | - | 181 | 13.4 % |
| 01.09 | - | 213 | 15.7 % |
| 01.10 | - | 104 | 7.7 % |

| Value | Label | Unweighted Frequency | % |
|--------------|----------------------------------|----------------------|-------------|
| 01.11 | - | 157 | 11.6 % |
| 01.12 | - | 175 | 12.9 % |
| 01.14 | - | 15 | 1.1 % |
| INC | IntCompStat = 4 missed interview | 0 | 0.0 % |
| Inc | - | 89 | 6.6 % |
| Total | | 1,354 | 100% |

Based upon 1,354 valid cases out of 1,354 total cases.

Location: 11-15 (width: 5; decimal: 0)

Variable Type: character

S1INTYR: S1 IntInfo: Year of Interview

What year did the interview take place in?

MEASURE: Interview Information

| Value | Label | Unweighted Frequency | % |
|---------------------|----------------------------------|----------------------|-------------|
| 2001 | - | 306 | 22.6 % |
| 2002 | - | 770 | 56.9 % |
| 2003 | - | 189 | 14.0 % |
| Missing Data | | | |
| -201 | IntCompStat = 4 missed interview | 89 | 6.6 % |
| Total | | 1,354 | 100% |

Based upon 1,265 valid cases out of 1,354 total cases.

Location: 16-19 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -201

S1INTLOC: S1 IntInfo: Interview location

Where did this interview take place?

MEASURE: Interview Information

| Value | Label | Unweighted Frequency | % |
|---------------------|------------------|----------------------|--------|
| 1 | Subject's home | 580 | 42.8 % |
| 2 | At the placement | 606 | 44.8 % |
| 3 | Somewhere else | 79 | 5.8 % |
| Missing Data | | | |

| Value | Label | Unweighted Frequency | % |
|--------------|----------------------------------|----------------------|-------------|
| -201 | IntCompStat = 4 missed interview | 89 | 6.6 % |
| Total | | 1,354 | 100% |

Based upon 1,265 valid cases out of 1,354 total cases.

Location: 20-23 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -201

S1PLCCOD: S1 IntInfo: Interview location - facility code

| Value | Label | Unweighted Frequency | % |
|---------------------|--|----------------------|-------------|
| 99999 | Masked for Confidentiality | 606 | 44.8 % |
| Missing Data | | | |
| -201 | IntCompStat = 4 missed interview | 89 | 6.6 % |
| -101 | NA: Interview not conducted at the placement | 659 | 48.7 % |
| Total | | 1,354 | 100% |

Based upon 606 valid cases out of 1,354 total cases.

Location: 24-28 (width: 5; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -201 , -101

S1PLCTYPE: S1 IntInfo: Interview location - facility type

What type of facility did the interview take place in?

MEASURE: Interview Information

| Value | Label | Unweighted Frequency | % |
|---------------------|---|----------------------|-------------|
| 8 | Residential treatment center (centralized staff, institutional setting) | 228 | 16.8 % |
| 14 | Secure | 166 | 12.3 % |
| 15 | Jail / Prison | 168 | 12.4 % |
| 16 | Detention | 34 | 2.5 % |
| 20 | Other | 10 | 0.7 % |
| Missing Data | | | |
| -201 | IntCompStat = 4 missed interview | 89 | 6.6 % |
| -101 | NA: Interview conducted not at placement | 659 | 48.7 % |
| Total | | 1,354 | 100% |

Based upon 606 valid cases out of 1,354 total cases.

Location: 29-32 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -201 , -101

S1MONTHS: S1 IntInfo: Number of months covered in the recall period

Number of months in the recall period.

MEASURE: Interview Information

Please note that only the first 50 response categories are displayed in the PDF codebook. To view all response categories, please analyze the data file in the statistical package of your choice (SAS, SPSS, Stata, R).

Based upon 1,265 valid cases out of 1,354 total cases.

Location: 37-40 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -201

S1SITE: S1 DEM: Study Site Location

The geographic site where the subject is located.

| Value | Label | Unweighted Frequency | % |
|-------|--------------|----------------------|-------------|
| 1 | Philadelphia | 700 | 51.7 % |
| 2 | Phoenix | 654 | 48.3 % |
| | Total | 1,354 | 100% |

Based upon 1,354 valid cases out of 1,354 total cases.

Location: 41-41 (width: 1; decimal: 0)

Variable Type: numeric

S1SGEND: S1 DEM: Subject gender

Subject's gender.

MEASURE: Demographics

| Value | Label | Unweighted Frequency | % |
|-------|----------------------------------|----------------------|-------------|
| 1 | Male | 1094 | 80.8 % |
| 2 | Female | 171 | 12.6 % |
| | Missing Data | | |
| -201 | IntCompStat = 4 missed interview | 89 | 6.6 % |
| | Total | 1,354 | 100% |

Based upon 1,265 valid cases out of 1,354 total cases.

Location: 42-45 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -202, -201, -9, -8

S1AGE: S1 DEM: Subject Age as of the interview date - Truncated

Subject's age at the time of the interview (Truncated); interview date minus the subject's DOB truncated to a whole number.

MEASURE: Demographics

| Value | Label | Unweighted Frequency | % |
|---------------------|----------------------------------|----------------------|-------------|
| 14 | - | 43 | 3.2 % |
| 15 | - | 221 | 16.3 % |

| 17 | - | 387 | 28.6 % |
| 18 | - | 291 | 21.5 % |
| 19 | - | 11 | 0.8 % |
| 20 | - | 1 | 0.1 % |
| Missing Data | | | |
| -201 | IntCompStat = 4 missed interview | 89 | 6.6 % |
| Total | | 1,354 | 100% |

Based upon 1,265 valid cases out of 1,354 total cases.

Location: 46-49 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -201

S1CTAGE: S1 DEM: Subject Age as of the interview date - Continuous

Subject's age at the time of the interview (Continuous); interview date minus the subject's DOB as a continuous variable.

MEASURE: Demographics

| Value | Label | Unweighted Frequency | % |
|---------------------|----------------------------------|----------------------|-------------|
| 99999 | Masked for Confidentiality | 1265 | 93.4 % |
| Missing Data | | | |
| -201 | IntCompStat = 4 missed interview | 89 | 6.6 % |
| Total | | 1,354 | 100% |

Based upon 1,265 valid cases out of 1,354 total cases.

Location: 50-54 (width: 5; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -201

S1BL_ETH: S1 DEM: Ethnicity stated at Baseline

Ethnicity (from baseline).

MEASURE: Demographics

| Value | Label | Unweighted Frequency | % |
|--------------|----------------------------|----------------------|-------------|
| 99999 | Masked for Confidentiality | 1354 | 100.0 % |
| Total | | 1,354 | 100% |

Based upon 1,354 valid cases out of 1,354 total cases.

Location: 55-59 (width: 5; decimal: 0)

Variable Type: numeric

S1ETHN_R: S1 DEM: Subjects Ethnicity - Recoded

Recoded ethnicity; self-reported ethnicity collapsed into 4 groups.

MEASURE: Demographics

| Value | Label | Unweighted Frequency | % |
|--------------|----------|----------------------|-------------|
| 1 | White | 274 | 20.2 % |
| 2 | Black | 561 | 41.4 % |
| 3 | Hispanic | 454 | 33.5 % |
| 4 | Other | 65 | 4.8 % |
| Total | | 1,354 | 100% |

Based upon 1,354 valid cases out of 1,354 total cases.

Location: 60-63 (width: 4; decimal: 0)

Variable Type: numeric

S1DEMO_PARDTH: S1 FamStr: Biological parents passed away during recall period

Whether either biological parent passed away in the recall period.

MEASURE: Demographics

| Value | Label | Unweighted Frequency | % |
|--------------|---|----------------------|-------------|
| 0 | No | 1242 | 91.7 % |
| 1 | Yes - Mom | 4 | 0.3 % |

| -202 | IntCompStat = 2 partial interview, data missing | 3 | 0.2 % |
| -201 | IntCompStat = 4 missed interview | 89 | 6.6 % |
| -101 | Skipped: Subject didnt have a primary caregiver | 269 | 19.9 % |
| Total | | 1,354 | 100% |

Based upon 992 valid cases out of 1,354 total cases.

Location: 68-71 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -800, -202, -201, -101, -9, -8

S1ARMSA_MEXAM: S1 ARSMA: Consider yourself to be Mexican American

Background Mexican American.

MEASURE: Acculturation Rating Scale for Mexican Americans-II (ARSMA-II)

The Acculturation Rating Scale for Mexican Americans-II (ARSMA-II; Cuellar, Arnold, and Maldonado, 1995) was adapted for this study to measure the adolescent's cultural orientation toward Mexican and Anglo cultures. This instrument was only administered to adolescents who identified themselves as Mexican-American. The scale contains 48 items to which participants respond on a 5-point Likert scale ranging from "Not at all" to "Extremely often or almost always," with higher scores indicating greater cultural orientation.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

| Value | Label | Unweighted Frequency | % |
|---------------------|-------|----------------------|--------|
| 0 | No | 946 | 69.9 % |
| 1 | Yes | 316 | 23.3 % |
| Missing Data | | | |

S1ENGLNG: S1 ARSMA: English Language Subscale

Anglo Orientation - Language; Mean of 8 items.

MEASURE: Acculturation Rating Scale for Mexican Americans-II (ARSMA-II)

The Acculturation Rating Scale for Mexican Americans-II (ARSMA-II; Cuellar, Arnold, and Maldonado, 1995) was adapted for this study to measure the adolescent's cultural orientation toward Mexican and Anglo cultures. This instrument was only administered to adolescents who identified themselves as Mexican-American. The scale contains 48 items to which participants respond on a 5-point Likert scale ranging from "Not at all" to "Extremely often or almost always," with higher scores indicating greater cultural orientation.

S1BSISOM: S1 BSI: Somatization

The mean of the individual items which comprise the somatization subscale.

MEASURE: Brief Symptom Inventory (BSI)

The Brief Symptom Inventory (BSI; Derogatis & Melisara, 1983) is a 53-item self-report inventory in which participants rate the extent to which they have been bothered (0 = "not at all" to 4 = "extremely") in the past week by various symptoms. The BSI has nine subscales designed to assess individual symptom groups: somatization (SOM, e.g., "Faintness or dizziness"), obsessive-compulsive (OC, e.g., "Having to check and double-check what you do"), interpersonal sensitivity (INT, e.g., "Feeling inferior to others"), depression (DEP, e.g., "Feeling no interest in things"), anxiety (ANX, e.g., "Feeling tense or keyed up"), hostility (HOS, e.g., "Having urges to break or smash things"), phobic anxiety (PHOB, e.g., "Feeling uneasy in crowds, such as shopping or at a movie"), paranoid ideation (PAR, e.g., "Others not giving you proper credit for your achievements"), and psychotism (PSY, e.g., "The idea that something is wrong with your mind"). The BSI also includes three scales that capture global psychological distress.

MEASURE: Brief Symptom Inventory (BSI)

The Brief Symptom Inventory (BSI; Derogatis & Melisara, 1983) is a 53-item self-report inventory in which participants rate the extent to which they have been bothered (0 = "not at all" to 4 = "extremely") in the past week by various symptoms.

The BSI has nine subscales designed to assess individual symptom groups: somatization (SOM, e.g., "Faintness or dizziness"), obsessive-compulsive (OC, e.g., "Having to check and double-check what you do"), interpersonal sensitivity (INT, e.g., "Feeling inferior to others"), depression (DEP, e.g., "Feeling no interest in things"), anxiety (ANX, e.g., "Feeling tense or keyed up"), hostility (HOS, e.g., "Having urges to break or smash things"), phobic anxiety (PHOB, e.g., "Feeling uneasy in crowds, such as shopping or at a movie"), paranoid ideation (PAR, e.g., "Others not giving you proper credit for your achievements"), and psychoticism (PSY, e.g., "The idea that something is wrong with your mind"). The BSI also includes three scales that capture global psychological distress.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1PHB_T: S1 BSI: Phobic Anxiety Clinically Significant

The mean of the clinically significant individual items which comprise the phobic anxiety subscale.

MEASURE: Brief Symptom Inventory (BSI)

The Brief Symptom Inventory (BSI; Derogatis & Melisara, 1983) is a 53-item self-report inventory in which participants rate the extent to which they have been bothered (0 = "not at all" to 4="extremely") in the past week by various symptoms. The BSI has nine subscales designed to assess individual symptom groups: somatization (SOM, e.g., "Faintness or dizziness"), obsessive-compulsive (OC, e.g., "Having to check and double-check what you do"), interpersonal sensitivity (INT, e.g., "Feeling inferior to others"), depression (DEP, e.g., "Feeling no interest in things"), anxiety (ANX, e.g., "Feeling tense or keyed up"), hostility (HOS, e.g., "Having urges to break or smash things"), phobic anxiety (PHOB, e.g., "Feeling uneasy in crowds, such as

shopping or at a movie"), paranoid ideation (PAR, e.g., "Others not giving you proper credit for your achievements"), and psychoticism (PSY, e.g., "The idea that something is wrong with your mind"). The BSI also includes three scales that capture global psychological distress.

S1BSIPSD: S1 BSI: Positive Symptom Distress Index

Positive Symptoms Distress Index; the sum of all item values divided by the PST.

MEASURE: Brief Symptom Inventory (BSI)

The Brief Symptom Inventory (BSI; Derogatis & Melisara, 1983) is a 53-item self-report inventory in which participants rate the extent to which they have been bothered (0 = "not at all" to 4= "extremely") in the past week by various symptoms. The BSI has nine subscales designed to assess individual symptom groups: somatization (SOM, e.g., "Faintness or dizziness"), obsessive-compulsive (OC, e.g., "Having to check and double-check what you do"), interpersonal sensitivity (INT, e.g., "Feeling inferior to others"), depression (DEP, e.g., "Feeling no interest in things"), anxiety (ANX, e.g., "Feeling tense or keyed up"), hostility (HOS, e.g., "Having urges to break or smash things"), phobic anxiety (PHOB, e.g., "Feeling uneasy in crowds, such as shopping or at a movie"), paranoid ideation (PAR, e.g., "Others not giving you proper credit for your achievements"), and psychoticism (PSY, e.g., "The idea that something is wrong with your mind"). The BSI also includes three scales that capture global psychological distress.

- (0) Not at all
- (1) A little bit
- (2) Moderately
- (3) Quite a bit
- (4) Extremely

S1CADPRE: S1 CarAdlt: Domains of Social Support

Domains of social support; Count of number of domains with at least 1 person mentioned.

MEASURE: Caring Adult

The Contact with Caring Adults inventory was derived from several sources for this study (Nakkula, et al., 1990; Phillips and Springer, 1992; Institute of Behavioral Science, 1990). It assesses the type and range of supportive adults in the adolescent's life. This support is assessed across eight domains: adults you admire and want to be like, adults you could talk to if you needed information or advice about something, adults you could talk to about trouble at home, adults you would tell about an award or if you did something well, adults with whom you can talk about important decisions, adults you can depend on for help, adults you feel comfortable talking about problems with, special adults who care about your feelings. This measure asks youth to identify the total number of adults who are supportive in each domain as well as to nominate the person that they are most likely to turn to within each domain. These endorsements are summarized across the eight different domains in three ways - the total domains with a person named, the diversity of the individuals named across the domains, and the depth of the pool of individuals named across the domains. The first of the dimensions calculated, Domains of Social Support, provides the number of different domains for which at least one caring adult is present. Diversity of Caring Adults, the second dimension of social support, identifies the unique individuals mentioned across all eight domains. Diversity of Caring Adults is further refined by also calculating the number of caring adults mentioned in the particular domain in which the youth identifies the highest number of caring adults (Maximum Diversity Within Domains). Finally, the Depth of Social Support assesses the number of caring adults who are mentioned in more than two domains, and further distinguishes between sources of support that are familial versus non-familial.

S1CADMDV: S1 CarAdlt: Maximum Diversity within Domains

Maximum diversity within domain; Count of adults mentioned in the domain with the highest number of adults mentioned.

MEASURE: Caring Adult

The Contact with Caring Adults inventory was derived from several sources for this study (Nakkula, et al., 1990; Phillips and Springer, 1992; Institute of Behavioral Science, 1990). It assesses the type and range of supportive adults in the adolescent's life. This support is assessed across eight domains: adults you admire and want to be like, adults you could talk to if you needed information or advice about something, adults you could talk to about trouble at home, adults you would tell about an award or if you did something well, adults with whom you can talk about important decisions, adults you can depend on for help, adults you feel comfortable talking about problems with, special adults who care about your feelings. This measure asks youth to identify the total number of adults who are supportive in each domain as well as to nominate the person that they are most likely to turn to within each domain. These endorsements are summarized across the eight different domains in three ways - the total domains with a person named, the diversity of the individuals named across the domains, and the depth of the pool of individuals named across the domains. The first of the dimensions calculated, Domains of Social Support, provides the number of different domains for which at least one caring adult is present. Diversity of Caring Adults, the second dimension of social support, identifies the unique individuals mentioned across all eight domains. Diversity of Caring Adults is further refined by also calculating the number of caring adults mentioned in the particular domain in which the youth identifies the highest number of caring adults (Maximum Diversity Within Domains). Finally, the Depth of Social Support assesses the number of caring adults who are mentioned in more than two domains, and further distinguishes between sources of support that are familial versus non-familial.

S1WALDEN: S1 Walden: Self-Regulation Scale

Walden self-regulation scale; Mean of the 9 items included.

MEASURE: Children's Emotional Intensity Child Report (Walden)

The Children's Emotion Regulation scale was adapted for this study to serve as a self-report measure of the adolescent's ability to regulate emotions (Walden, Harris, Weiss, and Catron, 1995). Only a subset (n=12) of the 33 original items contained in this scale are included in the Pathway's version. Examples of items

are "I know things to do to make myself more happy," and "I can change my feelings by thinking of something else". Participants respond on a 4-point Likert scale ranging from "Not at all like me" to "Really like me". Higher scores indicate a better ability to regulate emotion.

- (1) Not at all like me
- (2) A little like me
- (3) Kind of like me
- (4) Really like me

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1COM6MO: S1 ComIn: Involvement in Community Activities - Recall period

Involvement in community activities; count of endorsed activities, independent of the recency of involvement.

MEASURE: Community Involvement

The Community Involvement scale (Elliot, 1990) was modified for this study to assess the adolescent's involvement in structured community activities. Scores indicate the extent of an adolescent's involvement in four different community organizations (e.g., sports teams, scouts, church related groups, and volunteer work).

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

| Value | Label | Unweighted Frequency | % |

S1SCHTCH: S1 Education: Community school - Bonding to Teachers

Bonding to teachers; mean of 3 items in the scale for community school.

MEASURE: Education (Follow-ups): School Bonding Grades Activities and Orientation

The school attachment items included are taken from the work of Cernkovich and Giordano (1992). The items are used to evaluate the adolescent's educational experience along two dimensions: Bonding to Teachers (e.g., "Most of my teachers treat me fairly.") and School Orientation (e.g., "Schoolwork is very important to me."). Respondents rate 13 statements, using a 5-point Likert scale ranging from "Strongly Disagree" to "Strongly Agree," with higher scores indicating a greater degree of academic commitment. The items are first asked regarding the community school which the youth attends and, for youths housed in an institution for three or more months during the recall period, the items are repeated to attain the degree of academic commitment regarding the institutional school.

S1DETTCH: S1 Education: Institutional school - Bonding to Teachers

Bonding to teachers - institutional school; mean of 3 items in the scale for institutional school

MEASURE: Education (Follow-ups): School Bonding Grades Activities and Orientation

The school attachment items included are taken from the work of Cernkovich and Giordano (1992). The items are used to evaluate the adolescent's educational experience along two dimensions: Bonding to Teachers (e.g., "Most of my teachers treat me fairly.") and School Orientation (e.g., "Schoolwork is very important to me."). Respondents rate 13 statements, using a 5-point Likert scale ranging from "Strongly Disagree" to "Strongly Agree," with higher scores indicating a greater degree of academic commitment. The items are first asked regarding the community school which the youth attends and, for youths housed in an institution for three or more months during the recall period, the items are repeated to attain the degree of academic commitment regarding the institutional school.

Exposure to Violence - Witnessed; count of items subject witnessed.

MEASURE: Exposure to Violence (ETV)

The Exposure to Violence Inventory (ETV; Selner-O'Hagan, Kindlon, Buka, Raudenbush, & Earls, 1998) was modified for this study to assess the frequency of exposure to violent events. Items from the ETV document the types of violence the adolescent has both experienced (i.e., Victim - 6 items, e.g., "Have you been chased where you thought you might be seriously hurt in the past N months?") and observed (i.e., Witnessed - 7 items, e.g., "Have you seen someone else being raped, an attempt made to rape someone or any other type of sexual attack in the past N months?"). Higher scores indicate a greater exposure to violence.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1FRDQLT: S1 FQual: Friendship - Quality of Relationship

Friendship Quality of Relationship; mean of 10 items in the scale, at least 7 must contain valid data.

MEASURE: Friendship Quality

The items in the Friendship Quality scale are an adaptation of those included in the Quality of Relationships Inventory (Pierce, et al. 1994). The original scale was designed to measure interpersonal support from a single romantic partner but our adaptation changed the focus to a global rating regarding the youth's five closest friends (participant's are asked to average the rating across these closest friends). The scale contains 10 items which vary the context of support offered (e.g. "How much can you count on the people for help with a problem", "How close do you think you will be to these people in ten years" and "How much do you depend on these friends"). The youth responds on a 4-point likert scale ranging from "not at all" to "very much".

- (1) Not at all
- (2) A little
- (3) Quite a bit
- (4) Very much

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1FUTURE: S1 FOI: Future Orientation Inventory Scale

Future Outlook Inventory; mean of the eight items included in the computation; 7 items in the scale are not considered in the total score.

MEASURE: Future Outlook Inventory (FOI)

The Future Outlook Inventory is a 15-item scale used in this study to assess the degree each participant gives consideration to future planning. The scale was developed by Cauffman and Woolard (1999; unpublished), using items from the Life Orientation Task (Scheier and Carver, 1985), the Zimbardo Time Perspective Scale (Zimbardo, 1980), and the Consideration of Future Consequences Scale (Strathman, Gleicher, Boninger, and Edwards, 1994). The Future Outlook Inventory asks participants to rank from 1 to 4 (1=Never True to 4=Always True) the degree to which each statement reflects how they usually are (e.g., I will keep working at difficult, boring tasks if I know they will help me get ahead later). Higher scores indicate a greater degree of future consideration and planning.

- (1) Never true
- (2) Rarely true
- (3) Often true
- (4) Always true

S1RLG1: S1 Religion: During recall period how often attend religious service

During recall period how often did you attend church, synagogue, or other religious activities?

MEASURE: Importance of Spirituality

The Importance of Spirituality measure, developed by Maton (1989), is a highly reliable assessment of spirituality (Maton, Teti, Corns, Vieira-Baker, Lavine, Gouze, and Keating, 1996). The scale contains three items that ask participants to indicate how much their actions are influenced by belief in a god. Participants respond on a 5-point Likert scale ranging from "Not at all true" to "Completely true," with higher scores indicating a greater degree of spirituality. These three items are summed into a single scale score. Two additional items are included to evaluate the importance of one's religion (e.g., "How important has religion been in your life?"), as well as the participant's average yearly service attendance (e.g., "During the past year, how often did you attend church, synagogue, or other religious service?"). These are left as individual items.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1RLG2: S1 Religion: How important has religion been in your life

How important has religion been in your life?

MEASURE: Importance of Spirituality

The Importance of Spirituality measure, developed by Maton (1989), is a highly reliable assessment of spirituality (Maton, Teti, Corns, Vieira-Baker, Lavine, Gouze, and Keating, 1996). The scale contains three items that ask participants to indicate how much their actions are influenced by belief in a god. Participants respond on a 5-point Likert scale ranging from "Not at all true" to "Completely true," with higher scores indicating a greater degree of spirituality. These three items are summed into a single scale score. Two additional items are included to evaluate the importance of one's religion (e.g., "How important has religion been in your life?"), as well as the participant's average yearly service attendance (e.g., "During the past year, how often did you attend church, synagogue, or other religious service?"). These are left as individual items.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1PUNOTH: S1 PainCost: Certainty of Punishment - Other

Certainty of punishment - others; Mean of 7 items.

MEASURE: Indices of Personal and Social Costs and Rewards

The Indices of Personal and Social Costs and Rewards were adapted for this study to measure the adolescent's perceived likelihood of detection and punishment for any of several types of offenses (Nagin and Paternoster, 1994). The 78-item measure is comprised of five dimensions: Certainty of Punishment {Others and You (e.g., "How likely is it that kids in your neighborhood would be caught and arrested for fighting?")}, Social Costs of Punishment (e.g., "If the police catch me doing something that breaks the law, how likely is it that I would be suspended from school?"), Personal Costs of Punishment {Variety and Weight (e.g., "Has your court sentence kept you from hanging out with your friends as much as you used to?")}, Social Rewards of Crime {Stealing, Fighting and Robbery (e.g., "If I take things, other people my age will respect me more."}), and Personal Rewards of Crime (e.g., "How much 'thrill' or 'rush' is it to break into a store or home?"). \

MEASURE: Indices of Personal and Social Costs and Rewards

The Indices of Personal and Social Costs and Rewards were adapted for this study to measure the adolescent's perceived likelihood of detection and punishment for any of several types of offenses (Nagin and Paternoster, 1994). The 78-item measure is compromised of five dimensions: Certainty of Punishment {Others and You (e.g., "How likely is it that kids in your neighborhood would be caught and arrested for fighting?")}, Social Costs of Punishment (e.g., "If the police catch me doing something that breaks the law, how likely is it that I would be suspended from school?"), Personal Costs of Punishment {Variety and Weight (e.g., "Has your court sentence kept you from hanging out with your friends as much as you used to?")}, Social Rewards of Crime {Stealing, Fighting and Robbery (e.g., "If I take things, other people my age will respect me more.")}, and Personal Rewards of Crime (e.g., "How much 'thrill' or 'rush' is it to break into a store or home?").

S1MORDIS: S1 MorThk: Moral Disengagement Overall

Moral Disengagement Overall.

MEASURE: Moral Thinking

The Mechanisms of Moral Disengagement (Bandura, Barbaranelli, Caprara, & Pastorelli, 1996) was used for this study to measure the adolescent's attitudes concerning the treatment of others. The self-report measure contains 32 items to which participants respond on a 3-point Likert scale ranging from "Disagree" to "Agree," with higher scores indicating a greater moral detachment. Items from the scale tap the following eight dimensions: moral justification (e.g., "It is alright to beat someone who bad mouths your family."), euphemistic language (e.g., "Slapping and shoving someone is just a way of joking."), advantageous comparison (e.g., "It is okay to insult a classmate because beating him/her is worse."), displacement of responsibility (e.g., "Kids cannot be blamed for using bad words when all their friends do it."), diffusion of responsibility (e.g., "A kid in a gang

should not be blamed for the trouble the gang causes."), distorting consequences (e.g., "Teasing someone does not really hurt them."), attribution of blame (e.g., "If kids fight and misbehave in school it is their teacher's fault."), and dehumanization (e.g., "Some people deserve to be treated like animals.").

S1SCH_SCH40: S1 Motivate: In my neighborhood easy for young person to get good job

In my neighborhood, it's pretty easy for a young person to get a good-paying, honest job.

MEASURE: Motivation to Succeed

The motivation to succeed items are taken from Eccles et al. (1998). These six items tap the subject's assessment of the opportunities available in his/her neighborhood regarding schooling and work. At each follow-up interview, this measure reflects the perceived opportunities for the neighborhood where the adolescent lived the longest during the recall period. An additional two items are included regarding the adolescent's perceptions of how far they would like to go in school and how far they think they will go in school. These are treated as individual items.

S1SCH_SCH46: S1 Motivate: How far would you LIKE to go in school

How far would you like to go in school?

MEASURE: Motivation to Succeed

The motivation to succeed items are taken from Eccles et al. (1998). These six items tap the subject's assessment of the opportunities available in his/her neighborhood regarding schooling and work. At each follow-up interview, this measure reflects the perceived opportunities for the neighborhood where the

adolescent lived the longest during the recall period. An additional two items are included regarding the adolescent's perceptions of how far they would like to go in school and how far they think they will go in school. These are treated as individual items.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1ETHAFF: S1 Phinney: Ethnic Identity - Affirmation and Belonging

Affirmation & Belonging; the mean of 7 items in this subscale.

MEASURE: Multigroup Measure of Ethnic Identity (Phinney)

Sections of the Multigroup Measure of Ethnic Identity are used to determine an individual's overall sense of ethnic identity (Phinney, 1992). Items from the measure assess feelings of Affirmation & Belonging (e.g., "I am happy that I am a member of the group I belong to"), and Identity Achievement (e.g., "I have spent

time trying to find out more about my ethnic group, such as its history, traditions, and customs"). For this scale, participants respond to 12 items using a 4-point Likert scale ranging from "Strongly Agree" to "Strongly Disagree," with higher scores indicating greater ethnic identity.

S1HOOD: S1 NeiCon: Neighborhood Conditions Total

Total score; the mean of all 21 items in the scale.

MEASURE: Neighborhood Conditions

The Neighborhood Conditions Measure was adapted for this study to assess the environment surrounding the adolescent's home (Sampson & Raudenbush, 1999). Items from the self-report measure tap physical disorder of the neighborhood (e.g., "cigarettes on the street or in the gutters," "graffiti or tags"), as well as social disorder (e.g., "adults fighting or arguing loudly," "people using needles or syringes to take drugs"). The scale contains 21 items to which participants respond on a 4- point Likert scale ranging from "Never" to "Often," with higher scores indicating a greater degree of disorder within the community.

The neighborhood of focus for this measure is the neighborhood in which the youth spent the most time in the recall period. It is not necessarily the neighborhood that is most recent to the interview date.

S1NEISOC: S1 NeiCon: Social Disorder

Social disorder; the mean of the 9 social disorder questions.

MEASURE: Neighborhood Conditions

The Neighborhood Conditions Measure was adapted for this study to assess the environment surrounding the adolescent's home (Sampson & Raudenbush, 1999). Items from the self-report measure tap physical disorder of the neighborhood (e.g., "cigarettes on the street or in the gutters," "graffiti or tags"), as well as social disorder (e.g., "adults fighting or arguing loudly," "people using needles or syringes to take drugs"). The scale contains 21 items to which participants respond on a 4- point Likert scale ranging from "Never" to "Often," with higher scores indicating a greater degree of disorder within the community.

The neighborhood of focus for this measure is the neighborhood in which the youth spent the most time in the recall period. It is not necessarily the neighborhood that is most recent to the interview date.

S1PAKNOW: S1 PMonit: Parental Knowledge

Parental knowledge; Mean of 5 items.

MEASURE: Parental Monitoring

The Parental Monitoring inventory (Steinberg, Dornbusch, & Darling, 1992) was adapted for this study to assess parenting practices related to supervision of the adolescent (i.e. study participant). Preliminary questions establish the presence of a single individual (X) who is primarily responsible for the youth. The respondent's answers to several items about their current living situation, specifically whether they live with the identified caretaker, establishes the skip pattern followed in the parental monitoring items. The scale is composed of 9 items. Five items assess parental knowledge (e.g. How much does X know about how you spend your free time) and are answered on a 4-point likert scale ranging from "doesn't know at all" to "knows everything". Even if a youth does not live with the person identified as their primary caretaker, they are asked these questions. If the youth lives with the primary caretaker, four additional items are asked to assess parental monitoring of the youth's behavior (e.g. How often do you have a set time to be home on weekend nights?). These are answered on a 4-point likert scale which ranges from "never" to "always".

S1PORIENT_PTERM: S1 POrient: Has subject terminated parental rights

Subject has terminated parental rights.

MEASURE: Parent Orientation

The Youths Parenting Orientation scale was adapted for this study from Silverberg and Steinberg's (1990) subscale of Adult Role Orientation. The questions are asked only of youth who report having a child. The scale is used to assess the participant's view of his/her role as a parent (e.g., "Fathers/Mothers my age should devote most of their time and energy to rearing their child/children") and the degree to which this role is pervasive in his/her life. The inventory is a 6-item scale that asks participants to rank from 1 to 4 (1=Agree Strongly to 4=Disagree Strongly) the degree that each statement corresponds to their view of parenthood, with higher scores indicating greater parental orientation.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1MAWARM: S1 PQual: Parent Warmth - Mother

Parent Warmth - Mother; Mean of 9 items, 7 must contain valid data.

MEASURE: Parental Warmth and Hostility

The Quality of Parental Relationships Inventory (Conger, Ge, Elder, Lorenz, & Simons, 1994) was adapted for this study to assess the affective tone of the parental-adolescent relationship. Items from the measure tap parental warmth - mother (e.g., "How often does your mother let you know she really cares about you?"), parental hostility - mother (e.g., "How often does your mother get angry at you?"), parental warmth - father (e.g., "How often does your father tell you he loves you?"), and parental hostility - father (e.g., "How often does your father throw things at you?"). The scale contains 42 items (21 to assess the maternal relationship and 21 to assess the paternal relationship) to which participants respond on a 4-point Likert scale ranging from "Always" to "Never," with higher scores indicating a more supportive and nurturing parental relationship.

S1PRBEHV: S1 PDel: Antisocial Behavior

Peer Delinquency - Antisocial behavior; the mean rating of the prevalence of friends who engage in the 12 behaviors listed in this section. Data must be contained in 9 of the 12 items in order to compute a valid mean.

MEASURE: Peer Delinquency

The Peer Delinquent Behavior items are a subset of those used by the Rochester Youth Study (Thornberry et al., 1994) to assess the degree of antisocial activity among the adolescent's peers. There are two dimensions to this scale: Antisocial Behavior (e.g., "How many of your friends have sold drugs?") and Antisocial Influence (e.g., "How many of your friends have suggested that you should sell drugs?"). The scale contains 19 items to which participants respond on a 5-point Likert scale ranging from "None of them" to "All of them".

S1OPP01A: S1 OppSucc: How important to have a good job or career

How important is it to you . . . to have a good job or career?

MEASURE: Perceptions of Chances for Success

The Perceptions of Chances for Success measure (also called perceptions of opportunity) was adapted from the work of Menard & Elliott (1996) to assess the adolescent's prediction of his/her future adult success. Items from the measure tap the adolescent's investment in and perceived likelihood for

achievement in several areas. Specifically, the scale taps Aspirations for Work, Family & Law Abiding Behavior (e.g., "How important is it to you to have a good job or career?"), and Expectations for Work, Family, & Law Abiding Behavior (e.g., "What do you think your chances are to earn a good living?"). There are a total of 14 questions asked (divided evenly between aspirations and expectations) to which participants respond on a 5-point Likert scale ranging from "Not at all important/Poor" to "Very important/Excellent".

Higher scores for aspirations and expectations indicate greater optimism concerning future opportunities and/or success. Lower scores for "expectations fall short" indicate greater congruence between these perceptions.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1OPP07A: S1 OppSucc: How important to stay out of trouble with the law

How important is it to you . . . to stay out of trouble with the law?

MEASURE: Perceptions of Chances for Success

The Perceptions of Chances for Success measure (also called perceptions of opportunity) was adapted from the work of Menard & Elliott (1996) to assess the adolescent's prediction of his/her future adult success. Items from the measure tap the adolescent's investment in and perceived likelihood for achievement in several areas. Specifically, the scale taps Aspirations for Work, Family & Law Abiding Behavior (e.g., "How important is it to you to have a good job or career?"), and Expectations for Work, Family, & Law Abiding Behavior (e.g., "What do you think your chances are to earn a good living?"). There are a total of 14 questions asked (divided evenly between aspirations and expectations) to which participants respond on a 5-point Likert scale ranging from "Not at all important/Poor" to "Very important/Excellent".

Higher scores for aspirations and expectations indicate greater optimism concerning future opportunities and/or success. Lower scores for "expectations fall short" indicate greater congruence between these perceptions.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

Police picked you up and accused you of something in the recall period.

MEASURE: Procedural Justice

The Procedural Justice inventory was adapted for this study to measure the adolescent's perception of fairness and equity connected with arrest and court processing. The approach taken here was an adaptation of those taken by Tyler (1997). Conceptually, the idea is that there is an experiential basis for translating interactions with legal processes into perceptions and evaluations of the law and the legal actors that enforce it. This measure is designed to tap several dimensions of fair treatment: correctability, ethicality, representativeness and consistency (see Tyler and Huo, 2002). The outcomes of this process include evaluations of law and its underlying norms: legitimacy and legal cynicism.

The 55 items in this measure are divided into four sections: Police {Direct Experience & Others' Experience (e.g., "The police treat me the same way they treat most people my age.")}, Judge {Direct Experience & Others' Experience (e.g., "The court considered the evidence/viewpoints in this incident fairly.")}, Legitimacy (e.g., "I feel people should support the police."), and Legal Cynicism (e.g., "Laws are meant to be broken.").

S1PJJUDG: S1 ProJus: Procedural Justice - Judge

Summary procedural justice indices for judges; Mean of 19 items.

MEASURE: Procedural Justice

The Procedural Justice inventory was adapted for this study to measure the adolescent's perception of fairness and equity connected with arrest and court processing. The approach taken here was an adaptation of those taken by Tyler (1997). Conceptually, the idea is that there is an experiential basis for translating interactions with legal processes into perceptions and evaluations of the law and the legal actors that enforce it. This measure is designed to tap several dimensions of fair treatment: correctability, ethicality, representativeness and consistency (see Tyler and Huo, 2002). The outcomes of this process include evaluations of law and its underlying norms: legitimacy and legal cynicism.

The 55 items in this measure are divided into four sections: Police {Direct Experience & Others' Experience (e.g., "The police treat me the same way they treat most people my age.")}, Judge {Direct Experience & Others' Experience (e.g., "The court considered the evidence/viewpoints in this incident fairly.")}, Legitimacy (e.g., "I feel people should support the police."), and Legal Cynicism (e.g., "Laws are meant to be broken.").

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1LEGIT: S1 ProJus: Procedural Justice - Legitimacy

Legitimacy index; Mean of 11 items.

MEASURE: Procedural Justice

The Procedural Justice inventory was adapted for this study to measure the adolescent's perception of fairness and equity connected with arrest and court processing. The approach taken here was an adaptation of those taken by Tyler (1997). Conceptually, the idea is that there is an experiential basis for translating interactions with legal processes into perceptions and evaluations of the law and the legal actors that enforce it. This measure is designed to tap several dimensions of fair treatment: correctability, ethicality, representativeness and consistency (see Tyler and Huo, 2002). The outcomes of this process include evaluations of law and its underlying norms: legitimacy and legal cynicism.

The 55 items in this measure are divided into four sections: Police {Direct Experience & Others' Experience (e.g., "The police treat me the same way they treat most people my age.")}, Judge {Direct Experience & Others' Experience (e.g., "The court considered the evidence/viewpoints in this incident fairly.")}, Legitimacy (e.g., "I feel people should support the police."), and Legal Cynicism (e.g., "Laws are meant to be broken.").

S1PSMI: S1 PSMI: Overall

PSMI - overall; the mean of all 30 items in the inventory.

MEASURE: Psychosocial Maturity Inventory (PSMI)

The Psychosocial Maturity Inventory (PSMI Form D; Greenberger, Josselson, Knerr, & Knerr, 1974) has been used in previous research and shown excellent validity and psychometric properties (Greenberger & Bond, 1976). Items on the personal responsibility subscale tap self-reliance (i.e., feelings of internal control and the ability to make decisions without extreme reliance on others, e.g., "Luck decides most things that happen to me" {reverse coded}), identity (i.e., self-esteem, clarity of the self, and consideration of life goals, e.g., "I change the way I feel and act so often that I sometimes wonder who the 'real' me is" {reverse coded}), and work orientation (i.e., pride in the successful completion of tasks, e.g., "I hate to admit it, but I give up on my work when things go wrong" {reverse coded}). The scale contains 30 items to which participants respond on a 4-point Likert scale ranging from "Strongly Agree" to "Strongly Disagree". All items in the PSMI except one item are reverse coded so that higher scores indicate more responsible behavior.

- (1) Strongly Agree
- (2) Slightly Agree
- (3) Slightly Disagree
- (4) Strongly Disagree

S1RELQLT: S1 RQual: Quality of Relationship - Quality

Romantic Relationship - Quality of Relationship; Mean of 7 items.

MEASURE: Quality of Romantic Relationships

The Quality of Romantic Relationships inventory was adapted for this study to evaluate the support, conflict, and depth of the adolescent's romantic relationships (Pierce, 1994; Pierce, Sarason, Sarason, Solky-Butzel, & Nagle, 1997). This scale assess the relationship along 5 dimensions: Quality of Relationship (e.g., "In general, how happy are you with your relationship?"), Knowledge of Behavior and Deviance (e.g., "How much does {Name} know who you spend time with?"), Tolerance of Deviance (e.g., "Would {Name} know if you have been using drugs?"), Antisocial Influence (e.g., "Has X suggested that you should sell drugs?"), and Antisocial Behavior (e.g., "Has X damaged/destroyed property?". The fourth and fifth subscales were derived from items mirroring the ones asked regarding peer delinquency; but using the romantic partner, not the peers, as the referent person. For the first three subscales, higher scores indicate a more symbiotic romantic relationship and for the last two subscales, more antisocial influence, antisocial behavior and more monitoring respectively.

S1RELDEV: S1 RQual: Quality of Relationship - Deviance

Romantic Relationship - Tolerance of Deviance; Mean of 2 items.

MEASURE: Quality of Romantic Relationships

The Quality of Romantic Relationships inventory was adapted for this study to evaluate the support, conflict, and depth of the adolescent's romantic relationships (Pierce, 1994; Pierce, Sarason, Sarason, Solky-Butzel, & Nagle, 1997). This scale assess the relationship along 5 dimensions: Quality of Relationship (e.g., "In general, how happy are you with your relationship?"), Knowledge of Behavior and Deviance (e.g., "How much does {Name} know who you spend time with?"), Tolerance of Deviance (e.g., "Would {Name} know if you have been using drugs?"), Antisocial Influence (e.g., "Has X suggested that you should sell drugs?"), and Antisocial Behavior (e.g., "Has X damaged/destroyed property?"). The fourth and fifth subscales were derived from items mirroring the ones asked regarding peer delinquency; but using the romantic partner, not the peers, as the referent person. For the first three subscales, higher scores indicate a more symbiotic romantic relationship and for the last two subscales, more antisocial influence, antisocial behavior and more monitoring respectively.

- (1) Would not care at all
- (2) Would be bothered, but would not say anything to me about it
- (3) Would be bothered and would talk to me about it
- (4) Would get very upset with me

S1PEERPR: S1 PEI: Resistance to Peer Influence

Resistance to peer influence; mean across 10 dimensions.

MEASURE: Resistance to Peer Influence

The Resistance to Peer Influence (Steinberg, 2000) measure was developed for this study to assess the degree to which adolescents act autonomously in interactions with their peer group. Participants are first presented with two conflicting scenarios (e.g., "Some people go along with their friends just to keep their friends happy" and "Other people refuse to go along with what their friends want to do, even though they know it will make their friends unhappy") and are then asked to choose the scenario which most closely reflects their behavior. Finally, the participant is asked to rate the degree to which the statement is accurate (i.e. "sort of true" or "really true"). Ten such sequences are presented to the participant, each exploring a different dimension of potential influence: go along with friends, fitting in with friends, changing their mind, knowingly do something wrong, hiding true opinion, breaking the law, changing the way you usually act, taking risks, saying things don't really believe, and going against the crowd.

- (1) It's really true I'm influenced by my peers
- (2) It's sort of true I'm influenced by my peers
- (3) It's sort of true I prefer to be an individual
- (4) It's really true I prefer to be an individual

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1ROUT: S1 Rout: Unsupervised Routine Activities

Unsupervised routine activities; the mean of all four questions.

MEASURE: Routine Activities

Items from the Routine Activities measure were drawn from the "Monitoring the Future Questionnaire" (Osgood, Wilson, O'Malley, Bachman, and Johnston, 1996) and are used to assess the frequency of unstructured socializing. Items specifically tap activities that occur

in the absence of an authority figure (e.g., "How often did you get together with friends informally?"). The scale contains 3 items to which participants respond on a 5-point Likert scale ranging from "Never" to "Almost every day". Higher scores indicate a greater involvement in unstructured activities. A fourth item is asked to specify the number of evenings in a typical week the participant spends on "fun" activities.

S1SRO_DESTPROP: S1 SRO: Destroyed/damaged property - recall period

Whether the subject engaged in [purposely destroyed or damaged property that did not belong to you] over the recall period.

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

Location: 1673-1676 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -500 , -400 , -202 , -201 , -106 , -104 , -101 , -9 , -8

S1SRO_ENTBLDSTEAL: S1 SRO: Entered building to steal - recall period

Whether the subject engaged in [entered or broke into a building (home or business) to steal something] over the recall period.

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

Based upon 1,261 valid cases out of 1,354 total cases.

Location: 1729-1732 (width: 4; decimal: 0)

Variable Type: numeric

(Range of) Missing Values: -999, -998, -500, -400, -202, -201, -106, -104, -101

S1SRO_STOLECAR_GROUP: S1 SRO: Stole car/motorcycle - Was anyone with you the last time

Whether the subject was alone or if someone was with them the last time they

[stole a car or motorcycle to keep or sell].

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1SRO_SHOTAT_GROUP: S1 SRO: Shot at someone (pulled trigger) - Was anyone with you the last time

Whether the subject was alone or if someone was with them the last time they [shot AT someone (where you pulled the trigger)].

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

Variable Type: numeric

(Range of) Missing Values: -500 , -400 , -202 , -201 , -106 , -104 , -101 , -9 , -8

S1SRO_FIGHTGANG: S1 SRO: Fight part of gang - recall period

Whether the subject engaged in [beat up, threatened, or physically attacked someone as part of a gang] over the recall period.

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

(Range of) Missing Values: -500 , -400 , -202 , -201 , -106 , -104 , -101 , -9 , -8

S1SROPRV: S1 SRO: Total Offending Variety Proportion - Recall Period - recall period

Total Offending Variety Proportion Recall Period; A proportion score in which the numerator is the number of acts which were committed in the recall period and the denominator is the number of SRO questions answered.

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Two of the 24 SRO-items ("ever went joyriding" and "ever broke into a car to steal") were added to the Pathways research battery after a large number of subjects had completed either baseline or six-month follow-up interviews. Every subject at the follow-up interviews will have responses for 'ever broke into a car to steal' while only some will have values for 'ever went joyriding'. The introduction of these items produced a large amount of missing data making the calculation of a consistently meaningful score difficult across all available time points. As a result, it was decided that all SRO scores would be based on 22-items instead of the full, 24-item measure administered. Thus, although 24 items are administered for the vast proportion of the interviews, the calculation of the SRO score uses only 22 of these items.

S1SRSEND: S1 SRO: Total Offending Variety Proportion - Recall Period - No Drug - recall period

Total Offending Variety Proportion No Drug-Recall Period; A proportion score calculated in the same way as the Total Offending Variety Proportion - Recall Period variable, except that the items included in the calculation exclude three drug-related offenses. The numerator is the number of acts endorsed and the denominator is the SRO items answered. Both numerator and denominator calculations are made using a set of items that excluded the three drug items.

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Two of the 24 SRO-items ("ever went joyriding" and "ever broke into a car to steal") were added to the Pathways research battery after a large number of subjects had

completed either baseline or six-month follow-up interviews. Every subject at the follow-up interviews will have responses for 'ever broke into a car to steal' while only some will have values for 'ever went joyriding'. The introduction of these items produced a large amount of missing data making the calculation of a consistently meaningful score difficult across all available time points. As a result, it was decided that all SRO scores would be based on 22-items instead of the full, 24-item measure administered. Thus, although 24 items are administered for the vast proportion of the interviews, the calculation of the SRO score uses only 22 of these items.

S1SROINC: S1 SRO: Income Offending Variety Proportion - Recall Period - recall period

Income Offending Variety Proportion Recall Period; A proportion in which the numerator is the number of income offenses which were committed in the recall period and the denominator is the items which are considered income generating offenses that are not missing.

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Two of the 24 SRO-items ("ever went joyriding" and "ever broke into a car to steal") were added to the Pathways research battery after a large number of subjects had completed either baseline or six-month follow-up interviews. Every subject at the follow-up interviews will have responses for 'ever broke into a car to steal' while only some will have values for 'ever went joyriding'. The introduction of these items produced a large amount of missing data making the calculation of a consistently meaningful score difficult across all available time points. As a result, it was decided that all SRO scores would be based on 22-items instead of the full, 24-item measure administered. Thus, although 24 items are administered for the vast proportion of the interviews, the calculation of the SRO score uses only 22 of these items.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1ICFQND: S1 SRO: Income Offending Frequency - recall - No Drug - recall period

Income Offending Frequency-No Drug-Recall Period; Sum of the frequencies reported across the 8 non-drug income offenses.

MEASURE: Self-Reported Offending (SRO)

The Self-Reported Offending (SRO) used in this study was an adaptation of earlier instruments of this sort (Huizinga, Esbensen, and Weihs, 1991) designed to measure the adolescent's account of involvement in antisocial and illegal activities. The SRO consists of 24-items which elicit subject involvement in different types of more serious criminal activity. When an item is endorsed (when the adolescent says that they engaged in that activity during the follow-up period), a set of follow-up questions are asked that collect more information regarding the frequency, recency, and situations surrounding the reported offense (e.g., "How many times have you done this in the [recall period]?").

Two of the 24 SRO-items ("ever went joyriding" and "ever broke into a car to steal") were added to the Pathways research battery after a large number of subjects had

completed either baseline or six-month follow-up interviews. Every subject at the follow-up interviews will have responses for 'ever broke into a car to steal' while only some will have values for 'ever went joyriding'. The introduction of these items produced a large amount of missing data making the calculation of a consistently meaningful score difficult across all available time points. As a result, it was decided that all SRO scores would be based on 22-items instead of the full, 24-item measure administered. Thus, although 24 items are administered for the vast proportion of the interviews, the calculation of the SRO score uses only 22 of these items.

S1SCCLINT: S1 SocCap: Closure and Integration

Social Capital - Closure + Integration; mean of 8 items.

MEASURE: Social Capital

The Social Capital Inventory measures the connectedness an adolescent feels to his/her community (Nagin and Paternoster, 1994). This concept is explored along three dimensions: intergenerational closure (e.g., "How many of the parents of your friends know your parents?"), social integration (e.g., "How many of your teachers do your parents know by name?"), and perceived opportunity for work (e.g. "Employers around here often hire young people from this neighborhood?"). The measure contains

19 items; however, only 13 are considered in scoring. Higher scores indicate greater degree of community connectedness.

S1SUBUSE1: S1 SubUse: How often had alcohol to drink in recall period

How often have you had alcohol to drink in the recall period?

MEASURE: Substance Abuse

The Substance Use/Abuse Inventory is a modified version of a substance use measure developed by Chassin et al., 1991 for use in a study of children of alcoholics. This measure considers the adolescent's use of illegal drugs and alcohol over the recall period. The self-report measure is comprised of the following subscales: Substance Use (e.g., "How often have you had alcohol to drink?") and Social Consequences, Dependency and Treatment (e.g., "Have you had problems or arguments with

family or friends before because of your alcohol or drug use?" / "Have you wanted a drink or drugs so badly that you could not think of about anything else?"). In addition, Parental Substance Use (e.g., "Has your mother gotten into trouble at work because of drinking?") is assessed.

Consult the Pathways Study codebook for more information (www.pathwaysstudy.pitt.edu).

S1SUBUSE20: S1 SubUse: Num times used inhalants during recall period

How many times have you used inhalants to get high in the recall period?

MEASURE: Substance Abuse

The Substance Use/Abuse Inventory is a modified version of a substance use measure developed by Chassin et al., 1991 for use in a study of children of alcoholics. This measure considers the adolescent's use of illegal drugs and alcohol over the recall period. The self-report measure is comprised of the following subscales: Substance Use (e.g., "How often have you had alcohol to drink?") and Social Consequences, Dependency and Treatment (e.g., "Have you had problems or arguments with family or friends before because of your alcohol or drug use?" / "Have you wanted a drink or drugs so badly that you could not think of about anything else?"). In addition, Parental Substance Use (e.g., "Has your mother gotten into trouble at work because of drinking?") is assessed.

S1D6SC2: S1 SubUse: Recall period drug consequences

Recall period Drug Consequences; Count of social consequences in the recall period and attributed to drugs.

MEASURE: Substance Abuse

The Substance Use/Abuse Inventory is a modified version of a substance use measure developed by Chassin et al., 1991 for use in a study of

children of alcoholics. This measure considers the adolescent's use of illegal drugs and alcohol over the recall period. The self-report measure is comprised of the following subscales: Substance Use (e.g., "How often have you had alcohol to drink?") and Social Consequences, Dependency and Treatment (e.g., "Have you had problems or arguments with family or friends before because of your alcohol or drug use?" / "Have you wanted a drink or drugs so badly that you could not think of about anything else?"). In addition, Parental Substance Use (e.g., "Has your mother gotten into trouble at work because of drinking?") is assessed.

S1TCO1: S1 TCO: Past 7 days mind dominated by forces beyond control

During the past seven days (including today) . . . how often have you felt that your mind was dominated by forces beyond your control?

MEASURE: Threat Control Override (TCO)

The Threat/Control Override Psychotic Symptoms Scale (TCO; Link, Stueve, and Phelan, 1998) is used to measure the presence of three specific psychotic-like symptoms that have been found to have an association with violence in prior research of the link between mental illness and violence. Items from the measure assess the belief that others are seeking to do the adolescent harm, or that outside forces are in control of the adolescent's mind. The adolescent responds to these three items on a 5-point likert scale ranging from "Never" to "Very Often," with higher scores indicating greater delusional symptoms.

S1IMPULS: S1 WAI: Impulse Control

Impulse control; the mean of 8 items which comprise the scale. Seven of the eight items are reverse coded.

MEASURE: Weinberger Adjustment Inventory (WAI)

The Weinberger Adjustment Inventory (WAI; Weinberger and Schwartz, 1990) is an assessment of an individual's social-emotional adjustment within the context of external constraints. There are 4 subscales: Impulse control (e.g., "I say the first thing that comes into my mind without thinking enough about it".), suppression of aggression (e.g. "People who get me angry better watch out".), consideration of others (e.g., "Doing things to help other people is more important to me than almost anything else".) and temperance. The measure asks participants to rank how much (1=False to 5=True) their behavior in the past six months matches a series of statements. Higher scores on each of the subscales delineated below indicate more positive behavior (i.e. more impulse

control, greater temperance and greater consideration for others).

S1SUPAGG: S1 WAI: Suppression of Aggression

Suppression of aggression; the mean of 7 items which comprise the score.

Each item is reverse scored.

MEASURE: Weinberger Adjustment Inventory (WAI)

The Weinberger Adjustment Inventory (WAI; Weinberger and Schwartz, 1990) is an assessment of an individual's social-emotional adjustment within the context of external constraints. There are 4 subscales: Impulse control (e.g., "I say the first thing that comes into my mind without thinking enough about it".), suppression of aggression (e.g. "People who get me angry better watch out".), consideration of others (e.g., "Doing things to help other people is more important to me than almost anything else".) and temperance. The measure asks participants to rank how much (1=False to 5=True) their behavior in the past six months matches a series of statements. Higher scores on each of the subscales delineated below indicate more positive behavior (i.e. more impulse control, greater temperance and greater consideration for others).

- (1) False
- (2) Somewhat False
- (3) Not Sure
- (4) Somewhat True
- (5) True

S1CHARM: S1 YPI: Dishonest Charm

The sum of the 5 items contained in the dishonest charm subscale.

MEASURE: Youth Psychopathic Traits Inventory (YPI)

The Youth Psychopathic Traits Inventory (YPI; Andershed, Kerr, Sattin and Levander, 2002) is a self-report measure that assesses psychopathy among youth. Items from the measure make up the following ten subscales: dishonest charm (e.g., "I have the ability to con people by using my charm and smile"), grandiosity (e.g., "I'm better than everyone on almost everything"), lying (e.g., "Sometimes I lie for no reason, other than because it's fun"), manipulation (e.g., "I can make people believe almost anything"), remorselessness (e.g., "To feel guilt and regret when you have done something wrong is a waste of time"), unemotionality (e.g., "I usually feel calm when other people are scared"), callousness (e.g., "I think that crying is a sign of weakness, even if no one sees you"), thrill seeking (e.g., "I like to be where exciting things happen"), impulsiveness (e.g., "I consider myself as a pretty impulsive person"), and irresponsibility (e.g., "I have often been late to work or classes in school").

Additionally, the measure taps three dimensions of psychopathy: Grandiose Manipulative Dimension, Callous Unemotional Dimension, and Impulsive Irresponsible Dimension. The scale contains 50 items to which participants respond on a 4-point Likert scale ranging from "Does not apply at all" to "Applies very well". Several items in the scale are reverse coded so that higher scores indicate more psychopathic characteristics.

S1REMOR: S1 YPI: Remorselessness

The sum of the 5 items contained in the remorselessness subscale.

MEASURE: Youth Psychopathic Traits Inventory (YPI)

The Youth Psychopathic Traits Inventory (YPI; Andershed, Kerr, Sattin and Levander, 2002) is a self-report measure that assesses psychopathy among youth. Items from the measure make up the following ten subscales: dishonest charm (e.g., "I have the ability to con people by using my charm and smile"), grandiosity (e.g., "I'm better than everyone on almost everything"), lying (e.g., "Sometimes I lie for no reason, other than because it's fun"), manipulation (e.g., "I can make people believe almost anything"), remorselessness (e.g., "To feel guilt and regret when you have done something wrong is a waste of time"), unemotionality (e.g., "I usually feel calm when other people are scared"), callousness (e.g., "I think that crying is a sign of weakness, even if no one sees you"), thrill seeking (e.g., "I like to be where exciting things happen"), impulsiveness (e.g., "I consider myself as a pretty impulsive person"), and irresponsibility (e.g., "I have often been late to work or classes in school").

Additionally, the measure taps three dimensions of psychopathy: Grandiose Manipulative Dimension, Callous Unemotional Dimension, and Impulsive Irresponsible Dimension. The scale contains 50 items to which participants respond on a 4-point Likert scale ranging from "Does not apply at all" to "Applies very well". Several items in the scale are reverse coded so that higher scores indicate more psychopathic characteristics.

S1CALUNE: S1 YPI: Callous-Unemotional Dimension

Callous-Unemotional Dimension; Sum of 15 items in this dimension.

MEASURE: Youth Psychopathic Traits Inventory (YPI)

The Youth Psychopathic Traits Inventory (YPI; Andershed, Kerr, Sattin and Levander, 2002) is a self-report measure that assesses psychopathy among youth. Items from the measure make up the following ten subscales: dishonest charm (e.g., "I have the ability to con people by using my charm and smile"), grandiosity (e.g., "I'm better than everyone on almost everything"), lying (e.g., "Sometimes I lie for no reason, other than because it's fun"), manipulation (e.g., "I can make people believe almost anything"), remorselessness (e.g., "To feel guilt and regret when you have done something wrong is a waste of time"), unemotionality (e.g., "I usually feel calm when other people are scared"), callousness (e.g., "I think that crying is a sign of weakness, even if no one sees you"), thrill seeking (e.g., "I like to be where exciting things happen"), impulsiveness (e.g., "I consider myself as a pretty impulsive person"), and irresponsibility (e.g., "I have often been late to work or classes in school").

Additionally, the measure taps three dimensions of psychopathy: Grandiose Manipulative Dimension, Callous Unemotional Dimension, and Impulsive Irresponsible Dimension. The scale contains 50 items to which participants respond on a 4-point Likert scale ranging from "Does not apply at all" to "Applies very well". Several items in the scale are reverse coded so that higher scores indicate more psychopathic characteristics.

MEASURE: Youth Psychopathic Traits Inventory (YPI)

The Youth Psychopathic Traits Inventory (YPI; Andershed, Kerr, Sattin and Levander, 2002) is a self-report measure that assesses psychopathy among youth. Items from the measure make up the following ten subscales: dishonest charm (e.g., "I have the ability to con people by using my charm and smile"), grandiosity (e.g., "I'm better than everyone on almost everything"), lying (e.g., "Sometimes I lie for no reason, other than because it's fun"), manipulation (e.g., "I can make people believe almost anything"), remorselessness (e.g., "To feel guilt and regret when you have done something wrong is a waste of time"), unemotionality (e.g., "I usually feel calm when other people are scared"), callousness (e.g., "I think that crying is a sign of weakness, even if no one sees you"), thrill seeking (e.g., "I like to be where exciting things happen"), impulsiveness (e.g., "I consider myself as a pretty impulsive person"), and irresponsibility (e.g., "I have often been late to work or classes in school").

Additionally, the measure taps three dimensions of psychopathy: Grandiose Manipulative Dimension, Callous Unemotional Dimension, and Impulsive Irresponsible Dimension. The scale contains 50 items to which participants respond on a 4-point Likert scale ranging from "Does not apply at all" to "Applies very well". Several items in the scale are reverse coded so that higher scores indicate more psychopathic characteristics.
